Work experiences

● **Application Engineer** , at ETMC Exponenta. MathWorks representative in Russia

2019 - Present
- Increased knowledge in Robotics, Control Systems, Mechatronics, Model-Based Design, Code Generation and etc.
- Learned MATLAB / Simulink tools at developer level and applied these tools in real development projects:from web-scraping sites to modeling and implementing mobile autonomous transport.
- All work is related to the English language - a great chance to improve it.
- I learned how to work in a team, show initiative and participate in decision-making.
- Improved skills in the following programs: git, Linux OS and etc.
- And the work continues ...

About Me

In BMSTU I realized that productivity, responsibility and diligence are the coolest skills that can be. So I started to master them:
- I keep my own calendar, where I distribute all tasks and projects according to the degree of importance, giving them strictly appointed time.
- I use the special tracker to track the time spent on various tasks and projects, in order to understand how productive I am.
- I am always glad to learn something new and improve skills in already mastered tools and skills.
- I try to constantly improve my skills in my professional field and master new ones.

Education

🎓

2019
BMSTU
at Moscow
